Work Experience

- Leading the team and contact with client
 - Patience in problem-solving
 - Repairing many of machines
-

Projects

“**Customer Service**” is a console-based system with two users (Clients and Support Agents) designed to simulate real-time customer service communication using TCP socket programming in C#.

The goal is to create a lightweight messaging system that supports direct messaging and efficient handling of concurrent connections.

- Executed as a server-client application using C# and TCP Sockets.
- Implemented multithreading for handling multiple simultaneous users and message routing.
- Developed a custom message protocol to allow targeted communication between connected users

Team leader for 2 projects

Internship Experience

Introduction to Internet of Things Online in Cisco	Mar 2025
Introduction to Data Science Online in Cisco	Mar 2025
Introduction To CyberSecurity Online in Cisco	Jan 2025
Junior CyberSecurity Analyst Career Path Online in Cisco	Mar 2025
Ethical Hacker Online in Cisco	Mar 2025

Education

Aug 2023 - May 2025

Assiut International Technological University – Faculty of Egyptian-German Technology, Assiut

- Higher Diploma in Technology (Information Technology Specialization)
- Grade: Very Good (80.94%)
